

IS YOUR MASTER DATA READY FOR AI?

Business partner and material master data grows over the years—often unnoticed. Duplicates, incomplete attributes, and data redundancy remain hidden for a long time until processes, reporting, or compliance are affected.

SELF-CHECK: DO WE HAVE A MASTER DATA PROBLEM?

ANSWER THESE (ALL TOO FAMILIAR) QUESTIONS WITH YES/NO.

Are there multiple business partners or materials for the same real business partner or article?

Are important attributes incomplete or out of date?

If users find multiple hits during their search and are unsure which one is correct?

More than 2 **“Yes”** answers?
This is not an isolated case,
but rather an indication of a
structural quality problem!

Do reports and evaluations always match?

Is master data only corrected when problems arise in the process?

Are we maintaining data records that are no longer relevant to our business?

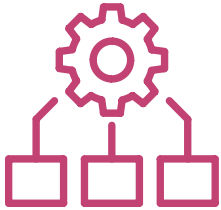

MASTER DATA QUALITY DOES NOT ONLY CONCERN DATA TEAMS

WITH DIGITALIZATION, AUTOMATION, AND SAP S/4HANA, MASTER DATA IS BECOMING A **CRITICAL CORPORATE ASSET**.

PROCESSES

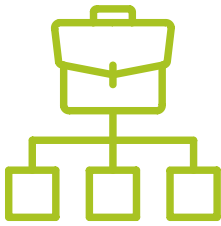

- Deliverability
- Lead times
- Error rates

COMPLIANCE

- Correct assignments
- Audit security

MANAGEMENT

- Reliable reporting & decisions

FUTURE

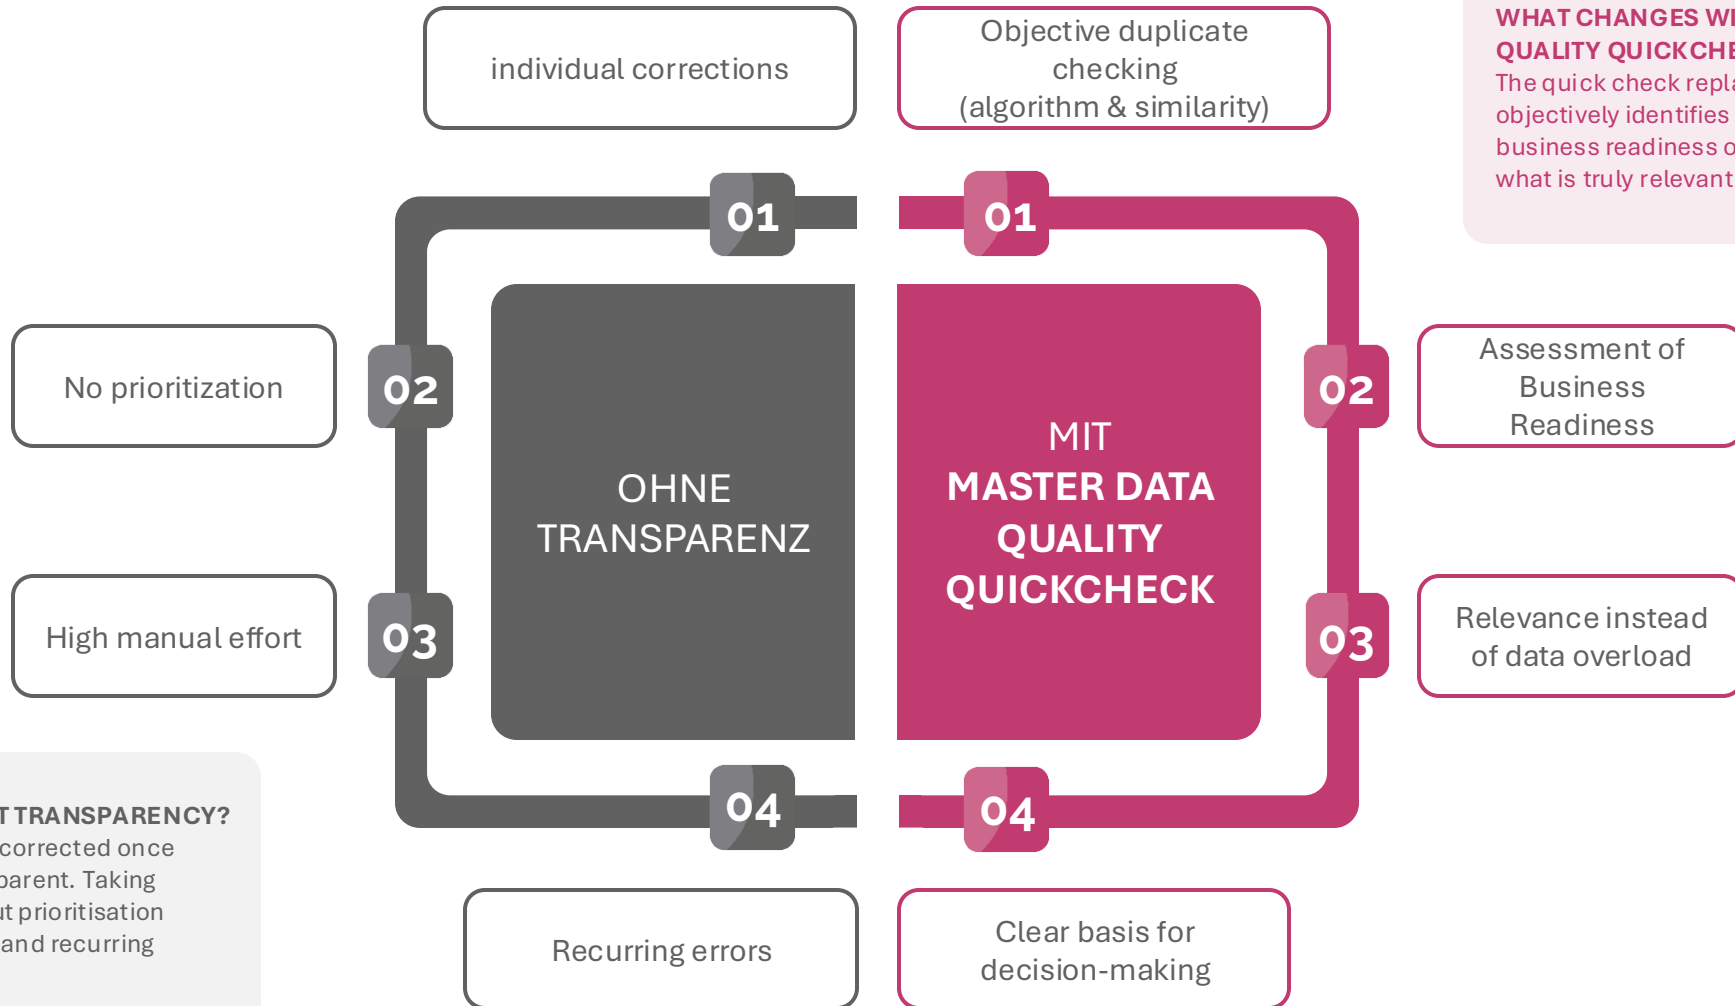

- Prerequisite for automation & AI

**NO CLEAN
MASTER DATA,
NO STABLE
BUSINESS.**

ASSUMPTIONS VS. FACTS

WHAT CHANGES WITH THE MASTER DATA QUALITY QUICKCHECK?
 The quick check replaces assumptions with facts. It objectively identifies duplicates, assesses the business readiness of the data, and focuses on what is truly relevant to the business.

WHAT HAPPENS WITHOUT TRANSPARENCY?
 Master data is usually only corrected once problems have become apparent. Taking individual measures without prioritisation leads to high manual effort and recurring errors.

MASTER DATA QUALITY QUICKCHECK

AI BASED ANALYSIS INSTEAD OF MANUAL SAMPLING

MASTER DATA QUALITY QUICKCHECK uses rule- and algorithm-based analysis to identify duplicates in business partner and material master data. Relevant attributes are weighted and similarities are systematically evaluated.

BUSINESS- ORIENTED QUALITY ASSESSMENT

In addition to pure duplicate checking, the business readiness of master data is analyzed based on completeness, timeliness, and business relevance. The focus is not on data volume, but on usability for processes and reporting.

SAP-COMPATIBLE & TRANSPARENT

The analysis is SAP-compatible, comprehensible, and reproducible. Results can be explained in technical terms and serve as a reliable basis for decision-making for cleanup, standardization, and further governance or MDG initiatives.

EIN PREIS – MEHRERE HEBEL

COMPONENTS OF THE QUICK CHECK:

DUPLICATE CHECK

- Identification of duplicates using an algorithm
- Weighted similarity analysis for business partners and materials

MASTER DATA QUALITY FOR BUSINESS PARTNERS & MATERIALS

- Business Readiness (Completeness and Timeliness)
- Relevance check

OPTIONAL EXTENSIONS (ADD-ONS):

DATA CLEANSING – ONE TIME

- Adjustment and consolidation
- Merger and harmonization

DATA CLEANSING – SUSTAINABLE (STAY CLEAN)

- Integration into your governance processes
- Roles, workflows, validations
- Automated duplicate detection
